HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 16 December 2009 has been entered.

Response to Amendment

Applicant's Amendment filed 16 December 2009 has been fully considered and entered.

Reasons for Allowance

Claims 1-8 are allowed. The following is an examiner's statement of reasons for allowance: (1) Applicant's Arguments on pages 4-7 are persuasive, and (2) the prior art cited on attached form PTO-892 is the most relevant prior art known. However, the invention of claims 1-8 distinguishes over the prior art of record because none of the references either alone or in combination disclose or render obvious an optical resin sheet, as defined in claim 1, comprising a cured resin layer containing glass fiber, wherein an elastic modulus of a cured resin material which forms the cured resin layer is from 0.1 to 1.3 GPa and the ratio of the elastic modulus of the glass fiber to the elastic modulus of the cured resin material, which forms the cured resin layer, is 25 or more, in addition to the other claim limitations. Claims 2-8 depend from claim 1. A discussion of the cited prior art follows.

Sumitomo Bakelite Co., Ltd. (Sumitomo) (JP 2003-033991) teaches a liquid crystal display (LCD) (paragraph [0019]), comprising; an optical resin sheet (lamine layer) comprising

Art Unit: 2874

a cured resin layer (resin constituent – e.g. epoxy resin) (paragraphs [0007] thru [0009]) containing glass fiber (glass fabric/cloth) (paragraph [0010]), wherein the ratio of the glass fiber material to a cured resin material, which forms the cured resin layer, is such that the thermal resistance is high and the coefficient of linear expansion is low, for the benefit of high bending strength (Abstract, paragraphs [0007] and [0010]).

However, Sumitomo is silent as to the specific claimed ratio, of the elastic modulus of the glass fiber to the elastic modulus of the cured resin material, of 25 or more.

Matsushita Electric Industrial Co., Ltd (Matsushita) (JP 2002-365624) teaches an LCD comprising a resin sheet (resin substrate LCD component) (1). Matsushita teaches the general elastic modulus values of glass and some well known cured resins (e.g. epoxy resin) (paragraphs [0004] and [0006]). The ratio of the elastic modulus of glass (8.0×10^{10}) to the elastic modulus of an epoxy resin (3.0×10^9) is approximately 27.

However, neither reference, either alone or in combination, teaches wherein an elastic modulus of a cured resin material which forms the cured resin layer is from 0.1 to 1.3 GPa and the ratio of the elastic modulus of the glass fiber to the elastic modulus of the cured resin material, which forms the cured resin layer, is 25 or more. Matsushita in fact teaches away from the claimed range.

Hence, at the time the invention was made, there would have been no reason or motivation for one of ordinary skill in the art to use the prior art to make the invention of claims 1-8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Art Unit: 2874

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
